**ABSTRACT**

To develop skills and understanding of interdisciplinary teamwork, the University of Miami's Department of Family Medicine and the School of Nursing conducted a project involving 10 teams of medical, nursing, and social work students. The primary objectives of the project were: (1) to instill and maintain positive attitudes in student physicians, nurses, and social workers toward interdisciplinary teamwork in the delivery of comprehensive health care, and (2) to increase mutual understanding of the differing orientations and skills of these professions. Based on data collected by such means as closed-circuit television and objective testing, significant differences between experimental and control groups were not revealed. However, the comparison group showed some significantly less favorable attitudes toward certain concepts. Subjective evaluations from students, preceptors, and families indicated project success. The study points to the need for more opportunities for student teams to work together early in their professional education and has implications for curricular modifications in health professional schools. Evaluation forms are appended. (JS)

#### **ABSTRACT**

The University of Miami's Department of Family Medicine and the School of Nursing demonstrated a one year (1970-71) pilot health team educational project. The primary objectives were to instill and maintain positive attitudes in students toward interdisciplinary teamwork and comprehensive health care, and to increase understanding of the different orientations and skills of these health professions. Ten student teams, each composed of one medical, nursing and social work student, supervised by faculty preceptors from the three disciplines, provided comprehensive health care for one family per team.

The program content for experimental student teams emphasized delivery of total health care through implementation of a family health care plan. Preceptors supervised through closed-circuit television and one-way mirror, and by regular team conferences and seminars.

Significant differences between experimental and control groups were not revealed through objective testing, although the comparison group (non-choosers) showed some significantly less favorable attitudes toward certain concepts. Subjective data, evaluations from students, preceptors, and families, indicated project success. This study points to the need for more opportunities for student teams to work together early in their professional education and has implications for curricular modifications in health professional schools.

National Center for Educational Research and Development  
(Regional Research Program)**

Implementation of the student health team concept is an innovation in current health education despite numerous suggestions in the literature<sup>1-6</sup> that students should learn and work together if they are to participate later in effective interprofessional teamwork. Leading educators<sup>7-8</sup> advocate reaching students early in their professional education to affect attitudes and behaviors positively, and to avoid stereotyping and role rigidities. To develop skills and understanding of interdisciplinary teamwork, the University of Miami's Department of Family Medicine and the School of Nursing demonstrated a one year pilot project. Ten student health teams, each composed of one medical, nursing and social work student, supervised by a faculty preceptor team from the three disciplines, provided comprehensive health care for one family per team (October through May, 1970-71).

The primary objectives of the project were: 1) to instill and maintain positive attitudes in student physicians, nurses and social workers toward interdisciplinary teamwork in the delivery of comprehensive health care; and 2) to increase mutual understanding of the differing orientations and skills of these professions.

#### METHOD

Selection of Students: Forty-five of the first year class of medical students (115) volunteered for the project. Of these 45 choosers, 10 were randomly assigned to the experimental group for the project, and 12 were assigned to the control group. A comparison group of 14 students was randomly selected from the 70 non-choosers in the class. Control and comparison groups participated only in pre and post-project attitude testing.

Experimental (10), control (10), and comparison (9) nursing students were chosen in the same manner from the introductory nursing course. Since only two first year graduate social work students were available for the project, it was necessary to assign them to five teams each and no comparisons were possible.

Setting: A model family practice unit, within the medical center, was utilized. Family medicine has operated this unit since 1965, combining undergraduate and graduate teaching with delivery of comprehensive family health care to a broad socioeconomic spectrum of private, fee-paying families. The Center is modern, well equipped and staffed to deliver care to approximately 1,000 families. Closed circuit television and one-way mirror facilitated student observation and teaching without inhibiting the patient or constricting student initiative.

Program Content: Ten families were chosen who were new to the Center and willing to work with students in an evening clinic. Visits with families over the seven month period ranged from five to 12 per team. The initial visit for every team was a family orientation meeting in which the three students interviewed the total family in order to learn about their social, medical and family history. A family health care plan was then designed with short and long term goals in each problem area identified by the students or family. This plan guided succeeding health maintenance visits and was modified to meet the family's developing needs.

Teams conferred with faculty preceptors (physician, nurse, social worker) before and after each subsequent visit to discuss the family's problems and needs, and the implementation of the health plan. Student's feelings and perceptions about family interactions, as well as about other team members and their roles were also discussed. In addition, a monthly student-directed seminar was held with students and preceptors on concepts of health team, comprehensive health care and family medicine, and other topics of student interest.

**Objective Evaluation:** Objective measures were related to attitude change. Experimental, control and comparison groups were measured at the beginning and end of the project on the Medical Attitudes Scale, used in the Hammond and Kern Colorado study<sup>9</sup> (36 items), Form E of the Rokeach Dogmatism Scale<sup>10</sup> (40 items), and on 10 concepts using Osgood's Semantic Differential<sup>11</sup>. Concepts relevant to the aims of the project were chosen. The same 15 bipolar adjectives were used to evaluate each concept.

**Data Analysis:** Data were analyzed by multivariate analysis of variance, testing the amount of change pre to post, on all scales, between experimental and control groups. In addition, experimentals and controls were compared with the non-chooser comparison group. Attitudes of nursing and medical students were compared at the end of the program to see how they differed, and separate evaluations for the medical and nursing groups showed amount of change pre to post for each group.

**Subjective Evaluation:** Subjective data included evaluations from students, preceptors, and families. At the conclusion of the project, a psychologist (outside rater) interviewed students individually for their final evaluation of the project. Preceptors evaluated each student on a rating scale and reported informal impressions. The families related their reactions concerning their health care and roles of the students on their health team.

## RESULTS

Pre and post data were available on 61 medical and nursing students.

**Objective Evaluation:** In general, there were few differences between experimental and control groups. Using a total score on the Medical attitudes test, Dogmatism Scale, and factor scores on the 10 Semantic Differentials, the groups were not significantly different statistically ( $P < .13$ ).

When the experimental, control, and comparison groups were evaluated, they were found to be significantly different in their concepts of (Semantic Differential) PSYCHOSOMATIC MEDICINE, NURSE, INDIGENT FAMILY, FAMILY MEDICINE and SOCIAL WORKER. Differences were all in the direction of being more positive for those who chose the family medicine elective (experimentals and controls). Groups did not differ on overall Medical Attitudes, Dogmatism, or concepts of PATIENT, DOCTOR, SOCIALIZED MEDICINE, or HEALTH TEAM; however, trends were again toward the choosers consistently having more positive attitudes.

Comparisons of medical and nursing students from the experimental group revealed their post attitude scores significantly different at  $P < .001$ . Table 1 shows 12 selected variables. As can be seen there were no differ-

ences in terms of Medical Attitudes and Dogmatism, although nurses tended to be slightly more dogmatic. Scores used from the Semantic Differential are the evaluative factor scores which Osgood has stated indicate attitude. At the 1% level of significance, the concepts of NURSE and SOCIAL WORKER were seen more favorably by nursing than by medical students. As the project focused on interdisciplinary teams, how each student viewed other team members was important. It is interesting that nurses held more positive views of both NURSE and DOCTOR, than medical students held of themselves and nurses. The nurse rated team members as NURSE 59.6, SOCIAL WORKER 58.1, and DOCTOR 57.3 while medical students rated the team, DOCTOR 56.5, NURSE 51.2, and SOCIAL WORKER 51.1.

TABLE I  
Comparison Between Medical and Nursing Students  
On Twelve Selected Variables

VARIABLES	MEDICAL STUDENT		NURSE		t-TEST
	Mean	S.D.	Mean	S.D.	
Medical Attitude	108.60	6.57	109.13	4.12	0.20
Dogmatism	116.10	17.46	120.75	23.31	0.48
Evaluative Factors (S.D.)					
Hospital	50.10	7.85	58.25	4.97	2.55**
Psychomatic Medicine	52.30	8.37	56.50	5.98	1.13
Nurse	51.20	6.05	59.63	3.16	3.55**
Indigent Family	43.10	9.86	41.50	8.65	0.36
Family Medicine	57.80	4.24	58.38	6.55	0.23
Patient	48.80	7.63	45.13	2.70	1.29
Social Worker	51.10	6.24	58.13	4.29	2.70**
Doctor	56.50	4.64	57.25	4.37	0.35
Health Team	55.40	5.93	57.13	6.29	0.60
Socialized Medicine	38.50	13.35	55.13	7.20	3.16**

\*\*p <.01 by Univariate t-Test

NOTE: Multivariate Difference using all these variables  $P < .001$

Lower Scores on Medical Attitudes = more favorable to comprehensive care

Higher Scores on Dogmatism = more dogmatic

Higher Scores on Semantic Differential = more positive

**Subjective Evaluation:** Although difficult to assess without controls, preceptor and student self-evaluations indicated that attitude and behavior changes occurred in students particularly in the area of learning to appreciate and relate to each others' disciplines. Major gains stated by students were: 1) becoming aware of the emotional correlates of physical illness; 2) understanding family interaction and its mutual effects; 3) learning that combined knowledge leads to better patient care; and 4) appreciating the importance of a social worker on the health team.

Other data which support success of the project are that nine of the 10 experimental medical students elected to care for their families another year, even though the team project had terminated. This fact combined

with a stated preference for family or general medicine as a career choice for six of the students is a further indication of project success. All the families elected to remain with the Family Health Center for continued care because of this positive experience.

#### CONCLUSIONS

It has been demonstrated that it is difficult to measure change in attitude; results might have been more significant if behavior rather than attitude were measured. Plans for the use of a behavior checklist with all groups did not materialize due to lack of funds and opportunities for continued observation of students' clinical behavior on other services. Future projects should include behavior measures such as observational rating scales, electives and career choices for all groups.

In some studies non-choosers have been used as controls. Our data would suggest that this is a risky procedure since there were differences between those who did or did not choose a Family Medicine elective. In this study, small sample size was a limiting factor. The finding of a  $P < .05$  difference between experimental and control groups with such a small sample could suggest differences might be found if a larger sample had been available.

The wide range of differences in attitudes of medical students and nurses although possibly attributable to age, sex, and educational levels, points to the need for more and better communication among health professionals. This limited project indicates that it would be valuable to have more opportunities for combined learning and working together for students from the different health disciplines. Studies of this type have further implications for curricular change in medical and other health professional schools.

### PRESENTATIONS AND PUBLICATIONS

A paper describing this project was accepted and presented at the 10th Annual Conference on Research in Medical Education, held in conjunction with the 82nd Annual Meeting of the Association of American Medical Colleges, November 1, 1971. The paper was published in the proceedings of that conference.

A similar condensed manuscript has been submitted to the Journal of Medical Education and accepted for future publication.

An article titled, "An Interprofessional Student Health Team Experience in a Family Clinic" was published by the nursing journal, Nursing Outlook, February, 1972, Volume 20, No. 2, 111-115.

**Directions:** This is a study of what medical students and people in the medical field think about a number of social and medical questions. The best answer to each statement below is your personal opinion. We have tried to cover many different points of view. You will find yourself strongly in favor of some and disagree strongly with others. For some statements your opinion will not be as clear cut. Whichever way you feel about any of the statements you can be certain that a good many people feel the way you do. Be sure to answer every item. After all, no knowledge, but only your opinion is involved. Think quickly; your immediate reaction to the statement is probably the best one. Read each statement carefully. Below it are five possible answers. Choose the answer you think best represents the way you feel and place a check mark in the space provided.

1. HOW IMPORTANT DO YOU THINK IT IS FOR THE DOCTOR TO KNOW THE EFFECT OF THE PATIENT'S ILLNESS ON HIS FAMILY IN ORDER TO PROVIDE ADEQUATE TREATMENT?

☐ Not important at all  
☐ Pretty unimportant  
☐ Not so important  
☐ Pretty important  
☐ Very important

2. THE GREATEST SERVICE A PHYSICIAN CAN PROVIDE IS IN FOLLOWING LONG TERM HEALTH AND ADJUSTMENT OF PATIENTS AND FAMILIES RATHER THAN IN CONCENTRATING ONLY ON THE TREATMENT OF IMMEDIATE ILLNESS COMPLAINTS OF HIS PATIENTS.

☐ Strongly disagree  
☐ Disagree  
☐ Undecided  
☐ Agree  
☐ Strongly agree

3. IN MEDICAL PRACTICE TODAY THERE ARE SUFFICIENT SPECIALISTS SO THAT A PHYSICIAN IN GENERAL PRACTICE SHOULD NOT ASSUME LONG TERM RESPONSIBILITY FOR HIS PATIENTS.

☐ Completely disagree  
☐ Disagree  
☐ Undecided  
☐ Agree for the most part  
☐ Completely agree

4. THE MEDICAL SCHOOL SHOULD TRAIN STUDENTS FOR SPECIALTIES RATHER THAN GENERAL PRACTICE.

☐ Disagree completely  
☐ Disagree  
☐ Undecided  
☐ Agree  
☐ Agree completely

5. DO YOU THINK THAT AS A PHYSICIAN YOU WOULD PREFER TO HAVE FOR YOUR PATIENTS ALL MEMBERS OF A FAMILY RATHER THAN PATIENTS AS INDIVIDUALS?
- ☐ Definitely not  
☐ No  
☐ Undecided  
☐ Yes  
☐ Definitely yes
6. THE MOST IMPORTANT FUNCTION OF THE PHYSICIAN IS TO IMMEDIATELY RELIEVE THE SUFFERING OF THE PATIENT.
- ☐ Strongly disagree  
☐ Disagree  
☐ Undecided  
☐ Agree  
☐ Strongly agree
7. IN A GENERAL PRACTICE THERE IS NO REASON TO STRESS GOOD HEALTH AND PROMOTE DISEASE PREVENTION SINCE THE AVERAGE PATIENT ONLY WANTS TO PAY FOR THE ALLEVIATION OF HIS DISEASE.
- ☐ For practically no cases at all  
☐ For very few cases  
☐ For some cases  
☐ For most cases  
☐ For practically all cases
8. HOW PRACTICAL DO YOU THINK IT IS FOR A DOCTOR IN CLINICAL PRACTICE TO TAKE TIME TO FOLLOW UP PROVOCATIVE CLUES OTHER THAN THE PRESENTING SYMPTOM?
- ☐ It is always impractical  
☐ It is usually impractical  
☐ Undecided  
☐ It is usually practical  
☐ It is always practical
9. DO YOU THINK MEDICAL TRAINING IN THE CLINICAL YEARS SHOULD CONCENTRATE MOST OF THE STUDENT'S TIME ON EVALUATION AND TREATMENT OF SPECIFIC DISEASE PROCESSES?
- ☐ Definitely not  
☐ No  
☐ Undecided  
☐ Yes  
☐ Definitely yes
10. A SPECIALIST SUCH AS AN OTOLOGIST, GYNECOLOGIST, PSYCHIATRIST, ETC., GENERALLY WOULD BE LESS EFFECTIVE ON A ROUTINE HOME CALL THAN A GENERAL PRACTITIONER.
- ☐ Strongly disagree  
☐ Disagree  
☐ Undecided  
☐ Agree  
☐ Strongly agree

11. DO YOU THINK THAT IN A MEDICAL SETTING, THE DOCTOR SHOULD HAVE ALL PERSONNEL INVOLVED IN THE TREATMENT OF PATIENTS PARTICIPATE IN CASE DISCUSSIONS REGARDLESS OF THEIR PROFESSION?

- ☐ Almost never
- ☐ Not very often
- ☐ Quite often
- ☐ Usually
- ☐ Almost always

12. TO WHAT EXTENT DO YOU THINK A MEDICAL DOCTOR IN A CLINICAL TEAM SHOULD CONSULT WITH THE TEAM MEMBERS, SUCH AS SOCIAL WORKER, PSYCHOLOGIST, ETC., BEFORE MAKING BASIC DECISIONS IN THE MANAGEMENT OF THE PATIENT, SUCH AS DISCHARGE, REFERRALS, OR PRONOUNCED CHANGES IN THERAPY?

- ☐ In none of his cases
- ☐ In some of his cases
- ☐ In about half of his cases
- ☐ In most of his cases
- ☐ In nearly all of his cases

13. HOW IMPORTANT DO YOU THINK IT IS TO HAVE NONMEDICAL SPECIALISTS INCLUDED ON A TREATMENT TEAM IN A MEDICAL SETTING?

- ☐ Not important at all
- ☐ Pretty unimportant
- ☐ Not so important
- ☐ Pretty important
- ☐ Very important

14. THE MEDICAL DOCTOR IN A CLINICAL TEAM CONSISTING OF PSYCHOLOGIST, SOCIAL WORKER, NURSE, THERAPISTS, AND TECHNICIANS SHOULD TAKE A DECIDEDLY DIRECTIVE RATHER THAN COORDINATING POSITION IF TREATMENT IS TO BE EFFECTIVE.

- ☐ Strongly disagree
- ☐ Disagree
- ☐ Undecided
- ☐ Agree
- ☐ Strongly agree

15. HOW IMPORTANT DO YOU THINK IT IS FOR A PHYSICIAN TO ACTIVELY PARTICIPATE IN ORGANIZED STATE PUBLIC HEALTH PROGRAMS?

- ☐ Not important at all
- ☐ Pretty unimportant
- ☐ Not so important
- ☐ Pretty important
- ☐ Very important

16. A MEDICAL DOCTOR IS FREE TO DECIDE WHETHER OR NOT HE WANTS TO ACCEPT THE OPINION OF A CONSULTANT.

- ☐ Almost never
- ☐ Seldom
- ☐ Undecided
- ☐ Quite often
- ☐ Almost always

17. IN GENERAL CLINICAL PRACTICE A MEDICAL SOCIAL WORKER IS UNNECESSARY PROVIDED AN EXPERIENCED NURSE IS AVAILABLE.

- ☐ Disagree completely
- ☐ Disagree
- ☐ Undecided
- ☐ Agree for the most part
- ☐ Agree completely

18. A MEDICAL DOCTOR SHOULD ACCEPT THE OPINION OF A CONSULTANT WITHOUT RESERVATION.

- ☐ Never
- ☐ Seldom
- ☐ Undecided
- ☐ Most of the time
- ☐ Always

19. AFTER A PHYSICIAN HAS EXPLAINED THE MEDICAL DIAGNOSIS AND PROGNOSIS OF A PATIENT TO HIS RELATIVES HE REFERS THE FAMILY TO THE SOCIAL WORKER FOR FURTHER DISCUSSION OF THEIR REACTIONS TO THE PATIENT'S DIAGNOSIS AND ILLNESS. HOW GOOD A PRACTICE DO YOU THINK THIS IS?

- ☐ A very poor practice
- ☐ A somewhat poor practice
- ☐ Undecided
- ☐ A fairly good practice
- ☐ A very good practice

20. A PATIENT'S ABILITY TO PAY FOR MEDICAL SERVICES SHOULD NOT INFLUENCE TREATMENT GIVEN BY THE DOCTOR.

- ☐ Strongly disagree
- ☐ Disagree
- ☐ Undecided
- ☐ Agree
- ☐ Strongly agree

21. ADEQUATE TREATMENT CANNOT BE DONE UNLESS PERSONAL RELATIONS WITH PATIENTS ARE KEPT TO A MINIMUM.

- ☐ Disagree completely
- ☐ Disagree
- ☐ Undecided
- ☐ Agree for the most part
- ☐ Agree completely

22. A DOCTOR GENERALLY SHOULD REFUSE TO CARE FOR PATIENTS THAT DEFINITELY INDICATE UNFAVORABLE RESPONSE TO TREATMENT.

- ☐ Completely disagree
- ☐ Disagree
- ☐ Undecided
- ☐ Agree for the most part
- ☐ Completely agree

23. HOW OFTEN DO YOU THINK THAT TO DO AN ADEQUATE JOB AS A DOCTOR, YOUR PERSONAL LIFE SHOULD BE SUBORDINATED TO THE DEMANDS OF CARING FOR PATIENTS?
- ☐ Not very often
  - ☐ Quite often
  - ☐ About half the time
  - ☐ Almost always
  - ☐ Always
24. IN GENERAL PRACTICE A DOCTOR SHOULD REFUSE TO TREAT PATIENTS WITH DISEASE PROCESSES BECAUSE HE IS NOT INTERESTED IN THEM. TO WHAT EXTENT DO YOU AGREE?
- ☐ Strongly disagree
  - ☐ Disagree
  - ☐ Undecided
  - ☐ Agree
  - ☐ Strongly agree
25. DO YOU THINK A DOCTOR SHOULD FEEL FREE TO REFUSE THE CARE OF PATIENTS WHO HE THINKS WILL BE UNCOOPERATIVE?
- ☐ He almost never should refuse
  - ☐ He usually should not refuse
  - ☐ Undecided
  - ☐ He occasionally should refuse
  - ☐ He almost always should refuse
26. GENERALLY THE MORE ILLNESSES A DOCTOR SEES THE LESS CONCERNED HE WILL BE WITH THE SUFFERING OF PATIENTS.
- ☐ Completely disagree
  - ☐ Disagree
  - ☐ Undecided
  - ☐ Agree for most part
  - ☐ Completely agree
27. HOW MUCH SHOULD A DOCTOR TRY TO FIND OUT ABOUT THE PERSONAL PROBLEMS OF HIS PATIENTS IN ADDITION TO PROBLEMS RELATED TO THEIR ILLNESSES?
- ☐ Hardly anything at all
  - ☐ Very little
  - ☐ Not so much
  - ☐ Very much
  - ☐ As much as possible
28. HOW MUCH DO YOU THINK PATIENTS CAN CONTRIBUTE TO THE TREATMENT PROCESS DURING THEIR ILLNESS?
- ☐ Practically nothing
  - ☐ Very little
  - ☐ Only a limited amount
  - ☐ Quite a lot
  - ☐ A very large amount

29. DO YOU THINK THAT IN A REGULAR OFFICE PRACTICE A BUSY DOCTOR CAN PROVIDE TIME TO TALK WITH EACH INDIVIDUAL PATIENT ABOUT PROBLEMS OTHER THAN HIS IMMEDIATE COMPLAINTS?
- ☐ Almost never
  - ☐ Not very often
  - ☐ Undecided
  - ☐ Usually
  - ☐ Almost always
30. MOST PEOPLE WHO ARE INTERESTED IN PSYCHIATRY HAVE EMOTIONAL PROBLEMS OF THEIR OWN.
- ☐ Disagree completely
  - ☐ Disagree somewhat
  - ☐ Undecided
  - ☐ Agree somewhat
  - ☐ Agree completely
31. THE GREAT MAJORITY OF SO-CALLED MENTAL DISORDERS CAN BE TRACED DIRECTLY TO AN HEREDITARY TENDENCY OF SOME SORT.
- ☐ Disagree completely
  - ☐ Disagree somewhat
  - ☐ Undecided
  - ☐ Agree somewhat
  - ☐ Agree completely
32. PSYCHIATRIC TREATMENT IS A LUXURY RATHER THAN A REAL NECESSITY TO MOST PATIENTS WHO ASK FOR IT.
- ☐ Disagree completely
  - ☐ Disagree somewhat
  - ☐ Undecided
  - ☐ Agree somewhat
  - ☐ Agree completely
33. AN EMOTIONAL UPSET SHOULD BE AS ACCEPTABLE AN EXCUSE FOR MISSING A FINAL EXAMINATION AS WOULD A SEVERE COLD.
- ☐ Disagree completely
  - ☐ Disagree somewhat
  - ☐ Undecided
  - ☐ Agree somewhat
  - ☐ Agree completely
34. A SOUND PRACTITIONER RESERVES HIS TIME FOR REALLY ILL PERSONS RATHER THAN NEUROTIC ONES.
- ☐ Disagree completely
  - ☐ Disagree somewhat
  - ☐ Undecided
  - ☐ Agree somewhat
  - ☐ Agree completely

35. THE EXCLUSIVE USE OF SIMPLE REASSURANCE AND PLACEBOS (e.g., sugar pills and other palliative techniques) IN THE TREATMENT OF NEUROTICS IS JUSTIFIED IN VIEW OF THE LACK OF EVIDENCE CONCERNING THE EFFECTIVENESS OF MORE COMPLICATED THERAPY.
- ☐ Disagree completely  
☐ Disagree somewhat  
☐ Undecided  
☐ Agree somewhat  
☐ Agree completely
36. IT IS USEFUL FOR SOCIETY TO DIVIDE PEOPLE INTO CATEGORIES OF "SANE" OR "INSANE."
- ☐ Disagree completely  
☐ Disagree somewhat  
☐ Undecided  
☐ Agree somewhat  
☐ Agree completely
37. PATIENTS ILL WITH EMOTIONAL DISORDERS NUMBER MORE THAN THE TOTAL OF CIVILIAN PATIENTS IN OUR HOSPITALS FOR ALL THE MEDICAL AND SURGICAL ILLNESSES PUT TOGETHER.
- ☐ Disagree completely  
☐ Disagree somewhat  
☐ Undecided  
☐ Agree somewhat  
☐ Agree completely
38. BEHAVIOR PATTERNS CAN BE ALTERED AT MOST ANY LIFE PERIOD--IN CHILDHOOD, ADOLESCENCE, AND ADULTHOOD.
- ☐ Disagree completely  
☐ Disagree somewhat  
☐ Undecided  
☐ Agree somewhat  
☐ Agree completely
39. PSYCHIATRIC KNOWLEDGE IS ESSENTIAL TO THE TREATMENT OF MORE THAN HALF OF THE PATIENTS A PHYSICIAN SEES IN HIS PRACTICE.
- ☐ Disagree completely  
☐ Disagree somewhat  
☐ Undecided  
☐ Agree somewhat  
☐ Agree completely
40. INTELLECTUALLY GIFTED CHILDREN ARE LIKELY TO BE WEAK AND RETARDED PHYSICALLY AND EMOTIONALLY UNSTABLE.
- ☐ Disagree completely  
☐ Disagree somewhat  
☐ Undecided  
☐ Agree somewhat  
☐ Agree completely

41. HEALTH SUPERVISION AS COMPARED WITH CURATIVE MEDICINE IS UNINTERESTING AND PROFITABLE TO THE PHYSICIAN.

- ☐ Definitely not
- ☐ No
- ☐ Undecided
- ☐ Yes
- ☐ Definitely yes

42. HYGIENE, OFTEN DEFINED AS THE SCIENCE OF HEALTH, IS AS MUCH A SCIENCE AS INTERNAL MEDICINE AND PEDIATRICS.

- ☐ Disagree completely
- ☐ Disagree
- ☐ Undecided
- ☐ Agree
- ☐ Agree completely

43. SPECIFIC KNOWLEDGE NECESSARY FOR PREVENTION OF DISEASE IS SO LIMITED AT THIS STAGE OF DEVELOPMENT THAT THE TIME OF A PRACTICING PHYSICIAN IS MUCH BETTER SPENT IN CURATIVE MEDICINE.

- ☐ Completely disagree
- ☐ Disagree
- ☐ Undecided
- ☐ Agree for the most part
- ☐ Completely agree

44. FOR A WELL-ROUNDED MEDICAL EDUCATION, WORK IN PEDIATRICS AND SURGERY IS DECIDEDLY MORE IMPORTANT THAN WORK IN PREVENTIVE MEDICINE.

- ☐ Strongly disagree
- ☐ Disagree
- ☐ Undecided
- ☐ Agree
- ☐ Strongly agree

45. PREVENTIVE MEDICINE NECESSITATES A DEGREE OF UNDERSTANDING OF PATIENT'S ATTITUDE TOWARD HEALTH AND DISEASE THAT IS UNUSUAL IN THE CURRENT PRACTICE OF MEDICINE.

- ☐ Completely disagree
- ☐ Disagree
- ☐ Undecided
- ☐ Agree for the most part
- ☐ Completely agree

46. IN PRESENT DAY PRACTICE THE DEMAND FOR TREATMENT OF DISEASE IS SO GREAT THAT HARDLY ANY TIME CAN BE SPARED TO CONCERN ONESELF WITH PREVENTION OF ILLNESS.

- ☐ Completely disagree
- ☐ Disagree
- ☐ Undecided
- ☐ Agree for the most part
- ☐ Completely agree

47. HOW IMPORTANT DO YOU THINK IT IS FOR A PHYSICIAN TO PARTICIPATE IN PROGRAMS OF ACCIDENT PREVENTION?

- ☐ Not important at all
- ☐ Pretty unimportant
- ☐ Not so important
- ☐ Pretty important
- ☐ Very important

48. SINCE PREVENTION OF DISEASE IS DIRECTLY RELATED TO THE PROPERTIES OF DISEASE ITSELF, THERE IS NO SPECIAL REASON TO TEACH THE PREVENTIVE ASPECTS IN SEPARATE COURSES.

- ☐ Disagree completely
- ☐ Disagree
- ☐ Undecided
- ☐ Agree
- ☐ Agree completely

49. THERE IS LITTLE VALUE IN STRESSING PRINCIPLES OF DISEASE PREVENTION AS PERSONAL HABITS OF MOST ADULT PATIENTS ARE SO FIRMLY ESTABLISHED THAT THE POSSIBILITY OF EFFECTING MORE LASTING CHANGE IS RATHER UNLIKELY.

- ☐ Disagree completely
- ☐ Disagree
- ☐ Undecided
- ☐ Agree
- ☐ Agree completely

50. PREVENTION OF DISEASE AS A MEDICAL ACTIVITY IS PRIMARILY THE RESPONSIBILITY OF HEALTH DEPARTMENTS RATHER THAN THE RESPONSIBILITY OF BEDSIDE PHYSICIANS.

- ☐ Disagree completely
- ☐ Disagree

- ☐ Agree for the most part
- ☐ Agree completely

## ROSENTHAL E SCALE

The following is a study of what the general public thinks and feels about a number of important social and personal questions. The best answer to each statement below is your personal opinion. We have tried to cover many different and opposing points of view you may find yourself agreeing strongly with some of the statements, disagreeing just as strongly with others, and perhaps uncertain about others; whether you agree or disagree with any statement, you can be sure that many people feel the same as you do.

Mark each statement in the left margin according to how much you agree or disagree with it. Please mark every one. Write +1, +2, +3, or -1, -2, -3, depending on how you feel in each case.

+1: I agree a little  
+2: I agree on the whole  
+3: I agree very much

-1: I disagree a little  
-2: I disagree on the whole  
-3: I disagree very much

- 1. The United States and Russia have just about nothing in common.
- 2. The highest form of government is a democracy and the highest form of democracy is a government run by those who are most intelligent.
- 3. Even though freedom of speech for all groups is a worthwhile goal, it is unfortunately necessary to restrict the freedom of certain political groups.
- 4. It is only natural that a person would have a much better acquaintance with ideas he believes in than with ideas he opposes.
- 5. Man on his own is a helpless and miserable creature.
- 6. Fundamentally, the world we live in is a pretty lonesome place.
- 7. Most people just don't give a "damn" for others.
- 8. I'd like it if I could find someone who would tell me how to solve my personal problems.
- 9. It is only natural for a person to be rather fearful of the future.
- 10. There is so much to be done and so little time to do it in.
- 11. Once I get wound up in a heated discussion I just can't stop.
- 12. In a discussion I often find it necessary to repeat myself several times to make sure I am being understood.
- 13. In a heated discussion I generally become so absorbed in what I am going to say that I forget to listen to what the others are saying.
- 14. It is better to be a dead hero than to be a live coward.
- 15. While I don't like to admit this even to myself, my secret ambition is to become a great man, like Einstein, or Beethoven or Shakespeare.
- 16. The main thing in life is for a person to want to do something important.

- \_\_\_ 17. If given the chance I would do something of great benefit to the world.
- \_\_\_ 18. In the history of mankind there have probably been just a handful of really great thinkers.
- \_\_\_ 19. There are a number of people I have come to hate because of the things they stand for.
- \_\_\_ 20. A man who does not believe in some great cause has not really lived.
- \_\_\_ 21. It is only when a person devotes himself to an ideal or cause that life becomes meaningful.
- \_\_\_ 22. Of all the different philosophies which exist in this world there is probably only one which is correct.
- \_\_\_ 23. A person who gets enthusiastic about too many causes is likely to be a pretty "wishy-washy" sort of person.
- \_\_\_ 24. To compromise with our political opponents is dangerous because it usually leads to the betrayal of our own side.
- \_\_\_ 25. When it comes to differences of opinion in religion we must be careful not to compromise with those who believe differently from the way we do.
- \_\_\_ 26. In times like these, a person must be pretty selfish if he considers primarily his own happiness.
- \_\_\_ 27. The worst crime a person could commit is to attack publicly the people who believe in the same thing he does.
- \_\_\_ 28. In times like these it is often necessary to be more on guard against ideas put out by people or groups in one's own camp than by those in the opposing camp.
- \_\_\_ 29. A group which tolerates too much differences of opinion among its own members cannot exist for long.
- \_\_\_ 30. There are two kinds of people in this world: those who are for the truth and those who are against the truth.
- \_\_\_ 31. My blood boils whenever a person stubbornly refuses to admit he's wrong.
- \_\_\_ 32. A person who thinks primarily of his own happiness is beneath contempt.
- \_\_\_ 33. Most of the ideas which get printed nowadays aren't worth the paper they are printed on.
- \_\_\_ 34. In this complicated world of ours the only way we can know what's going on is to rely on leaders or experts who can be trusted.
- \_\_\_ 35. It is often desirable to reserve judgment about what's going on until one has had a chance to hear the opinions of those one respects.

- \_\_\_ 36. In the long run the best way to live is to pick friends and associates whose tastes and beliefs are the same as one's own.
- \_\_\_ 37. The present is all too often full of unhappiness. It is only the future that counts.
- \_\_\_ 38. If a man is to accomplish his mission in life it is sometimes necessary to gamble "all or nothing at all."
- \_\_\_ 39. Unfortunately, a good many people with whom I have discussed important social and moral problems don't really understand what's going on.
- \_\_\_ 40. Most people just don't know what's good for them.

## PRECEPTOR EVALUATION

Resident's Name \_\_\_\_\_

Date \_\_\_\_\_

Preceptor's Name \_\_\_\_\_

**DIRECTIONS:** Please circle the point on the scale under each question that best describes the resident's behavior at this time. Some sample behaviors are listed beside the first and last point on the scale. As you will note, 1 = the most positive response and 5 = the least positive response. If you think the resident only partially demonstrates some of these behaviors, select some point on the scale continuum between 1 and 5.

SECTIONS 1 - DOCTOR-PATIENT RELATIONSHIP**OVERALL ATTITUDE TOWARD PATIENTS**

Shows interest in patient as a person, is warm, friendly, but professional in attitude, non-judgmental toward other cultures and styles of living.

Does not seem interested in patients, except as they represent disease, is not friendly, warm, or understanding, appears judgmental and biased with patients.

1                      2                      3                      4                      5

**STUDENT'S ABILITY TO COMMUNICATE WITH PATIENTS**

Uses clear appropriate questions and responses, uses language patients can understand, picks up on verbal and non-verbal cues, is able to establish positive relationships through use of effective interviewing skills.

Cannot relate to patients effectively, misses non-verbal cues, does not use appropriate language that patient understands.

1                      2                      3                      4                      5

**CONTINUITY OF CARE**

Is sensitive and responsible to total patient needs, recognizes importance of seeing patients regularly for health maintenance, providing for follow-up, planning for future health care based on previous patient contacts and knowledge of family.

Seems to understand only the immediate situation and relates care to that rather than a continuum of need.

1                      2                      3                      4                      5

## COMPREHENSIVENESS OF CARE

Is complete in taking a history and physical, considers health education and preventive care, social and emotional aspects of health and illness, patient needs as well as demands, and can discuss these concepts with team as well as patients.

Is disease oriented, focuses on medical problems alone.

---

1                      2                      3                      4                      5

## FAMILY ORIENTATION

Understands how family interaction, motivations, and roles affect health and illness of all family members, sees family as the unit of care.

Does not seem to see value in family orientation, focuses only on the patient and his problems.

---

1                      2                      3                      4                      5

## STUDENT'S ATTITUDE TOWARD TEAM MEMBERS

Is able to work effectively with other team members, is friendly, cooperative, responsible, dependable, has positive attitude toward team approach.

Appears to have a negative attitude toward working with other members of the team.

---

1                      2                      3                      4                      5

## COMMUNICATION WITH OTHER TEAM MEMBERS

Is able to relate to team members professionally, communicates ideas effectively, keeps team informed concerning his knowledge about the patient and family, and consults with other team members concerning their knowledge and perceptions.

Does not communicate with team members, is unable to relate or relates on a personal but not professional level, does not use information from other team members.

---

1                      2                      3                      4                      5

Preceptor Evaluation (continued)  
UNDERSTANDING OF TEAM FUNCTION

Knows how various team members function, appropriately consults with team, exhibits behavior congruent with a comprehensive physician role.

Shows little or no understanding of roles of team members, does not use team approach.

---

1 2 3 4 5

FLEXIBILITY IN TEAM FUNCTION

Is secure enough in his role as a team member to recognize which member of the team should be more involved at which point in time and able to share medical treatment with others whose services may be called for, recognizes this kind of approach as practical and useful in delivery of health care.

Must always be the "leader" of the team, is unable to share or delegate responsibility for patient care, does not seem to appreciate the value in team approach.
